BINKS COMPLETELY REDESIGNS ITS AIR ASSIST AIRLESS MANUAL SPRAY GUN LINE.

(May 2010) Glendale Heights, IL – Binks introduces its AA1600M and the AA4400M spray guns that feature increased performance, comfort and durability. With a softer spray and a variable spray pattern, these guns adapt to any job and are critical to optimal spray performance. Their ergonomic design and perfect balance reduce operator stress while the forged body upholds the Binks reputation for durability.

The new air assist airless guns provide many updated features including:

- An adjustable spray pattern that allows you to dial in your spray width to match your parts and reduce overspray.
- Three different tip options, including a twist tip that quickly and easily removes clogs, keeping you on the job
- HVLP or LVMP technologies provide a wider choice of spray options
- Anodized aluminum air caps resist corrosion and last longer
- In-line needle is easy to remove, reducing repair time

For end users, we are offering a "rebate" consisting of free spray tips. Flyers will be placed in the boxes of all guns sold through September 1, 2010.

As a business unit of _____ Inc., _____ Industrial Finishing is focused on creating value-added products and innovative customer solutions.
